

Prestige Radiators Limited – Environmental Mandate: 16th July 2025

At Prestige Radiators Limited, we believe that environmental responsibility is not just a corporate goal — it's a duty we owe to future generations. We are committed to minimising our environmental impact at every stage of our operations, from product design and sourcing to packaging and distribution.

Our Core Environmental Goals:

Significantly reduce single-use plastics across our packaging operations.

Use 100% recyclable and biodegradable materials wherever possible.

Support product longevity through repairable designs and sustainable materials.

Work only with like-minded suppliers who share our values and hold ISO14001 and ISO9001 certifications.

Packaging Commitment

Our top priority is to eliminate plastic in our packaging. We now use paper-based packaging tapes exclusively and the vast majority of our products are protected using 100% recycled paper-based materials.

While some heavier or more delicate products currently require plastic bubble wrap for safe transport, we are actively exploring alternative, plastic-free protective solutions — with the ultimate goal of eliminating all plastic from our packaging processes.

Sustainable Product Design

We design and select our products with sustainability in mind

Many of our electric radiators are fully repairable, extending their usable life and reducing landfill waste.

We choose materials that are durable, recyclable, and environmentally harmless wherever possible.

Products not manufactured in-house are carefully sourced from manufacturers who share our commitment to environmental standards.

Company-Wide Responsibility

Every employee at Prestige Radiators Limited plays a role in reducing our environmental footprint. We strive to:

Reduce energy consumption across our operations.

Minimise waste at every stage of the manufacturing and packing process.

Promote recycling and proper waste separation.

Support green initiatives, including reforestation and urban planning efforts.

Compliance & Continuous Improvement

We adhere to all applicable environmental regulations and are constantly seeking innovative ways to improve. Our aim is not just compliance, but leadership in environmental responsibility within our industry.
